

## CURRENT SYSTEM

**IMPACT:** Patient access to medications is delayed because payers and health plans must wait to review the clinical trial information once the medication is approved by the FDA.

**IMPACT OF MAKING THIS SWITCH:** By distributing clinical trial information to payers and health plans earlier, the review process is able to start earlier so expedited coverage decisions can be made immediately upon FDA approval.

## A BETTER SYSTEM

**IMPACT:** Proactive distribution of clinical trial information to payers and health plans so they can make expedited coverage decisions upon FDA approval.
