

THE VALUE OF MANAGED CARE PHARMACY

When patients use mail order pharmacies to receive their medication in 90-day supplies:

For brand medications reimbursed by commercial payers, average patient savings was **13%**.

For generic medications reimbursed by commercial payers, average patient savings was **22%**.

For brand medications reimbursed by Medicare, average patient savings was **12%**.

When patients use community pharmacies to receive their medication in 90-day supplies:

For brand medications reimbursed by commercial payers, average patient savings was **32%**.

For generic medications reimbursed by commercial payers, average patient savings was **23%**.

For brand medications reimbursed by Medicare, average patient savings was **7%**.

Patients using mail-order pharmacies for 90-day supplies had the highest therapy adherence, with 83% of patients using mail order pharmacies having 80% of days or more covered per year—higher than other dispensing methods.

The analysis also found there are significant differences in cost for specialty drugs driven by the site of care. When comparing three physician-administered drugs (Prolia, Entyvio and Ocrevus) being prescribed in different settings, we found significantly higher costs to plan sponsors in the HOPD setting relative to the pharmacy setting. When administered in an office setting, the difference in cost to plan sponsors was less pronounced and varied by drug.

Medicaid and Medicare Beneficiaries

- As of 2021, 85% of Medicaid beneficiaries are enrolled in some form of managed care, and 75% are enrolled in comprehensive managed care through MCOs.
- Under Medicare, 45% of beneficiaries chose to obtain inpatient and outpatient medical benefits through Medicare Advantage plans rather than through the traditional fee-for-service program (i.e., Parts A and B).

 This snapshot of where people got their prescription drug coverage in 2021 shows that nearly all insured Americans have prescription drug coverage.

- This chart compares the volume of dispensed prescriptions per enrollee per method of payment for 2019 and 2021.
- Medicare patients receive a substantially higher number of prescriptions than enrollees in other types.

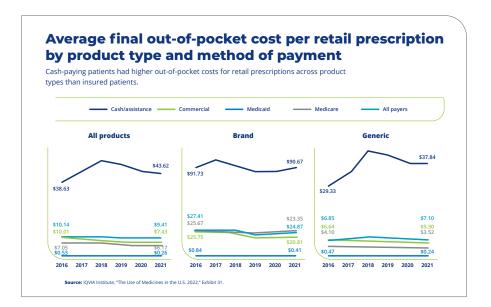

- From 2013 to 2014, individuals who went from uninsured to Medicaid had an average of 13.3 more prescriptions filled and those going from uninsured to private had an average of four more prescriptions filled.
- Medicaid expansion through the ACA led to a 19% increase in Medicaid prescriptions or roughly nine additional prescriptions annually per newly eligible beneficiary.

Mulcahy, Christine Eibner, and Kenneth Finegold, "Gaining Coverage Through Medicaid Or Private Insurance Increased Prescription Use and Lowered Out-Of-Pocket Spending," Health Affairs, Volume 35, no. 9, September 2016, p. 1729 (https://www.healthaffairs.org/doi/10.1377/hlthaff.2016.0091, accessed June 7, 2023).

- According to IQVIA, cashpaying patients paid an average of \$43.62 per prescription in 2021, over five times more than any other patient group.
- The uninsured pay more out of pocket for their prescriptions.

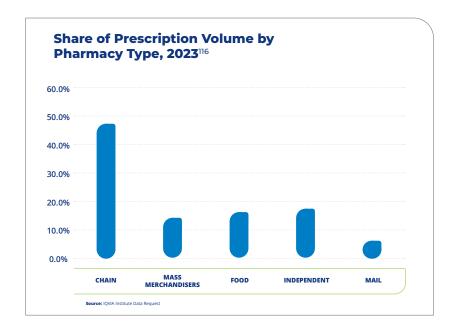

- This chart highlights the use of prior authorization for enrollees within commercial plans.
- Approximately 83% of enrollees have nearly all of their prescriptions readily accessible without Prior Authorization

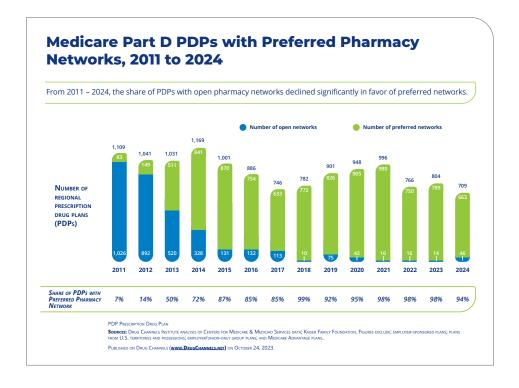

Pharmacy Types

- +
- There are five main types of retail pharmacies in the United States: 1.
 Chain pharmacies (e.g., Walgreens, CVS), 2. Mass merchandisers (e.g., Walmart), 3. Food stores (e.g., Kroger, Safeway), 4. Independent pharmacies, 5. Mail order pharmacies
- This figure shows the share of prescriptions that flowed through each pharmacy type in 2023.

- Within Medicare Part D, 94% of standalone prescription drug plans (PDPs) in 2024 had a preferred network compared with 51% of Medicare Advantage prescription drug plans (MA-PDs).
- Among standalone PDP plans, the use of preferred networks has grown significantly over time, as shown here.
- About 50% of employersponsored health plans utilize a narrow or preferred network.
